

QC SOFTWARE GOES GREEN

"USANA is dedicated to implementing green initiatives, and we are proud to be working with a company that has the same goals. We are grateful that QC Software has provided USANA with valuable tools to continue our mission to protect and preserve the environment."

--Jim Brown, Vice President of Operations, USANA Health Sciences

From the beginning, QC Software has led the way in going green. Our WCS is a proven solution that assists our customers in reducing costs by conserving resources, minimizing waste and streamlining operations.

In addition to reducing the carbon footprint, our solutions address the critical issues facing the material handling industry: planning, productivity, on-time delivery, customer satisfaction, etc. We provide customers with the tools to carefully plan and execute the material handling process from start to finish, based on their own unique business requirements.

"Sustainability has always been one of our goals," said Jerry List, Vice President of QC Software, "so it is very gratifying to see the results. Our customers have been extremely pleased with our applications because they have enhanced their green practices while increasing their profitability."

One success story comes from our customer, USANA Health Sciences. Since the start of 2008, USANA has recycled 160 tons of corrugated cardboard and 13 tons of plastic wrap as a result of its green initiatives. "We are grateful that QC Software has provided USANA with valuable tools to continue our mission to protect and preserve the environment," stated Jim Brown, Vice President of Operations.

We understand the importance of sustainability and will continue to find innovative solutions for our customers. If you are ready to realize the benefits of going green, QC Software is ready to help you reach your goals.
